

Voice-Directed Automation

Speak to your AI about any project detail.
It will relay instructions to your team.

Task Lookup Table

Show All

As id	client	task	deadline	assigned	status	priority
1	Internal	Review contract	August 13, 2025 12:00	Lisa	Not Started	Medium
2	Bloom Events	Schedule kickoff call	September 16, 2025	Luke	On Hold	Low
3	Bloom Events	Content approval	July 15, 2025	John	Complete	Medium
4	Acme Corp	Team meeting	September 16, 2025	Marta	In Progress	Medium
5	Jack Holdings	QA review	August 22, 2025	John	In Progress	Medium
6	Internal	Review contract	August 20, 2025	Marta	On Hold	Low
7	Acme Corp	Prep presentation	August 19, 2025	Marta	Blocked	Low
9	Bloom Events	Schedule kickoff call	August 7, 2025	Luke	In Progress	Medium

New page

Call to check any task status.
Delegate without dashboards, pinging, or typing.
Skip the apps. Talk and execute.

One Call. Six Tools. Aligned Action.

Twilio captures your call while the
Voiceflow agent interprets your
task inquiry.

n8n searches your **Notion**
database and delivers the task
response back to your
conversation.

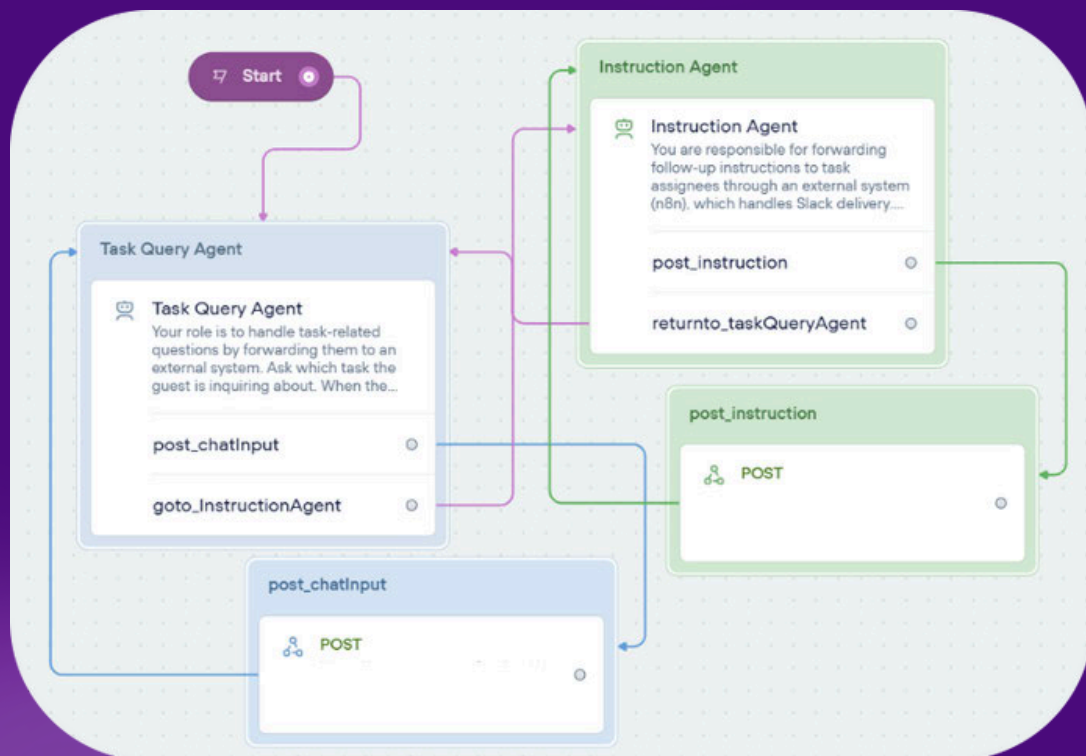

You give new instructions on the same call. **n8n** routes
them to **Slack** and creates an email trail in **Gmail**.

The result: faster decisions, fewer
miscommunications, and cleaner ops.

Talk Through the Task with Voiceflow.

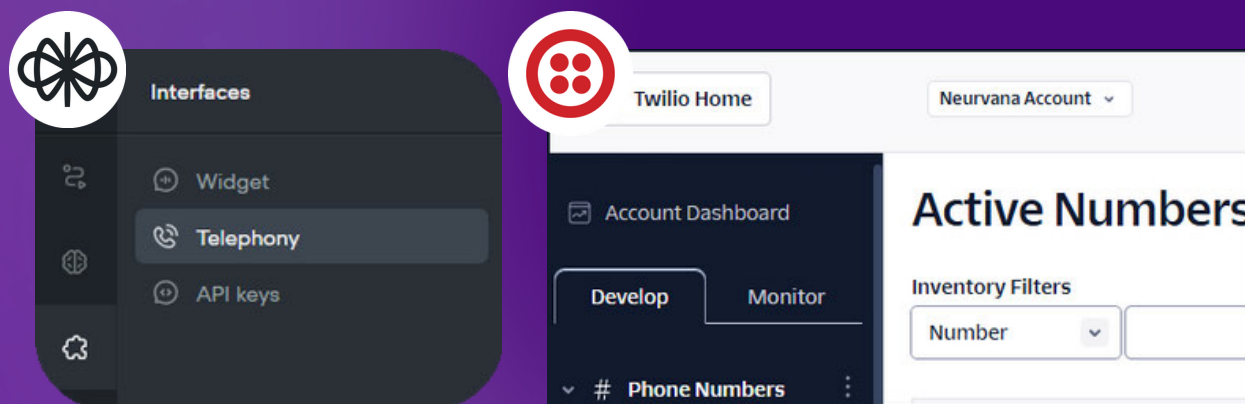

Ask about a task. The Status Agent returns the details you need.

Give a follow-up. The Instruction Agent sends it straight to your team.

Each agent uses its own webhook into a shared n8n automation.

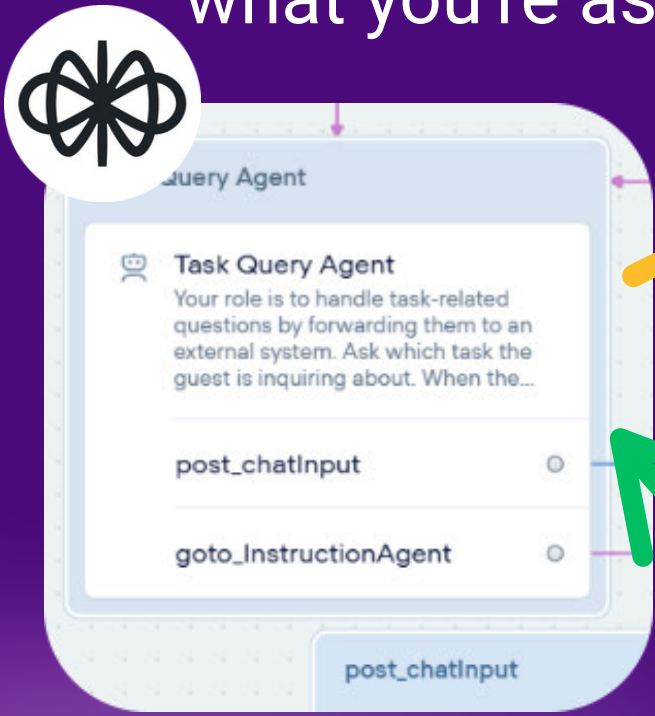

Twilio powers the call, and Voiceflow carries the conversation.

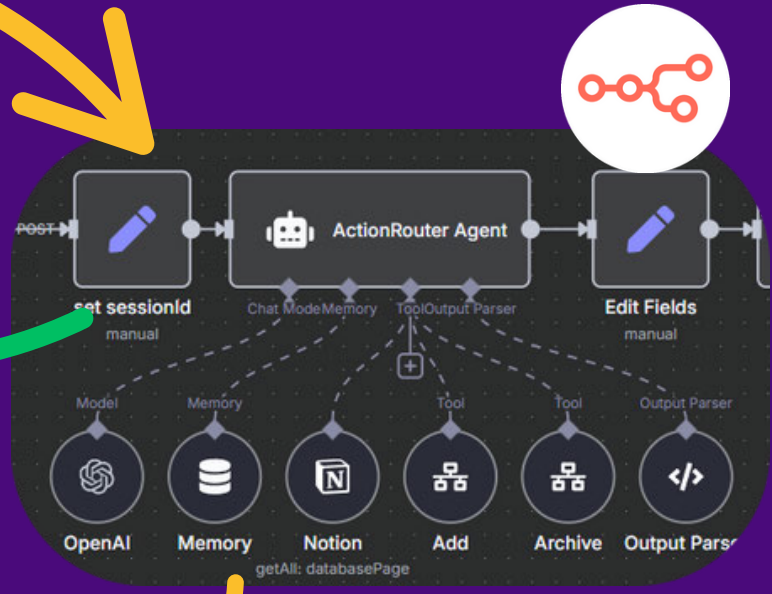

The Data Flow Pipeline

Every step adds precision: parsing your request, searching your records, and delivering a clear response.

Voiceflow understands what you're asking.

n8n finds the right information & formats the response.

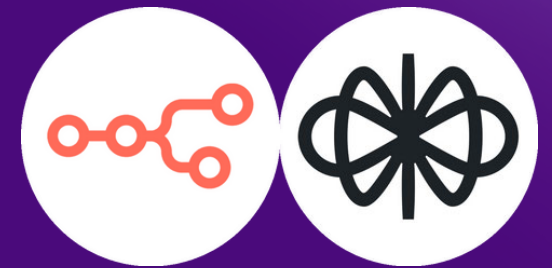

Notion provides instant data access.

Task Clarity Achieved. Now Direct the Next Move.

You receive a clear,
actionable task update.

Based on what you heard,
you give new instructions.

Your directive is captured and
delivered to the team for action.

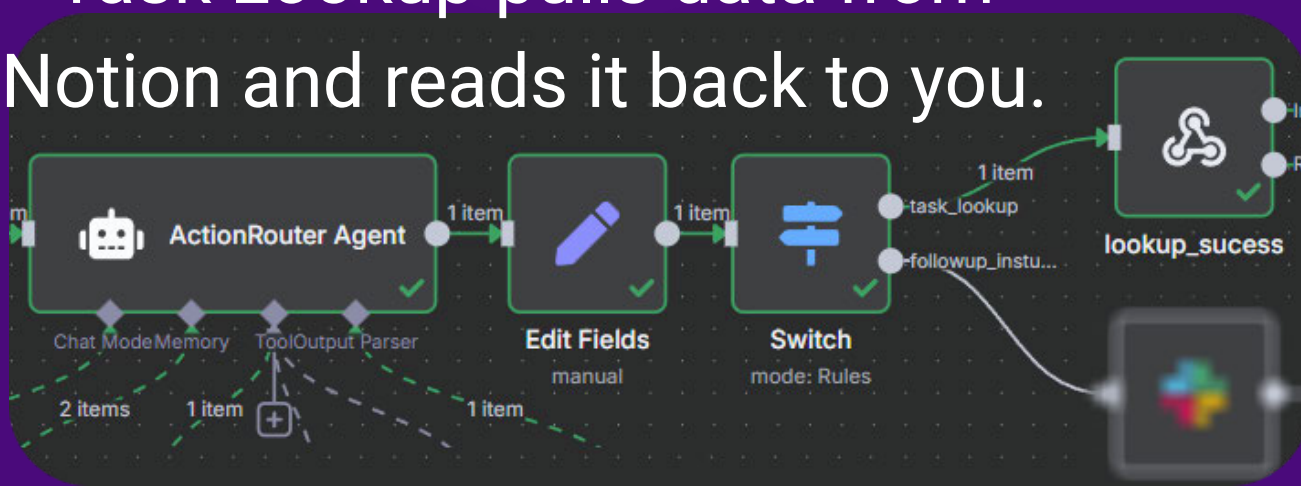

Intent Detection Routes the Workflow.

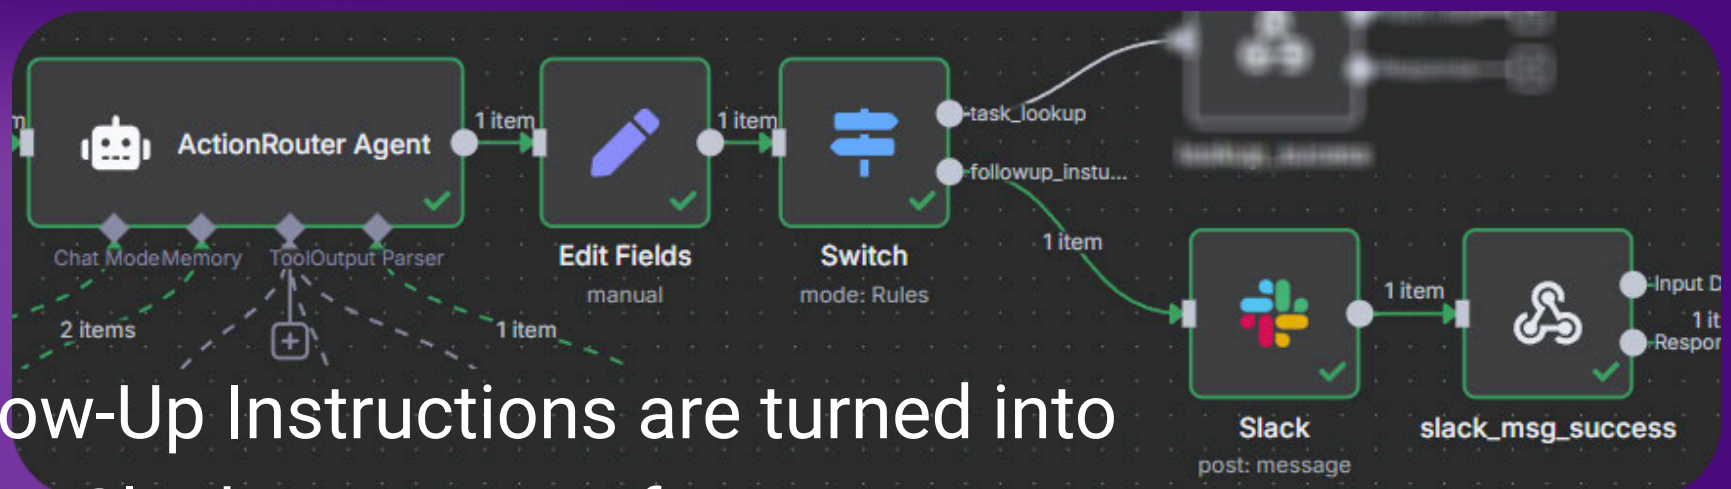

The system recognizes whether you're asking for details or assigning action.

Task Lookup pulls data from Notion and reads it back to you.

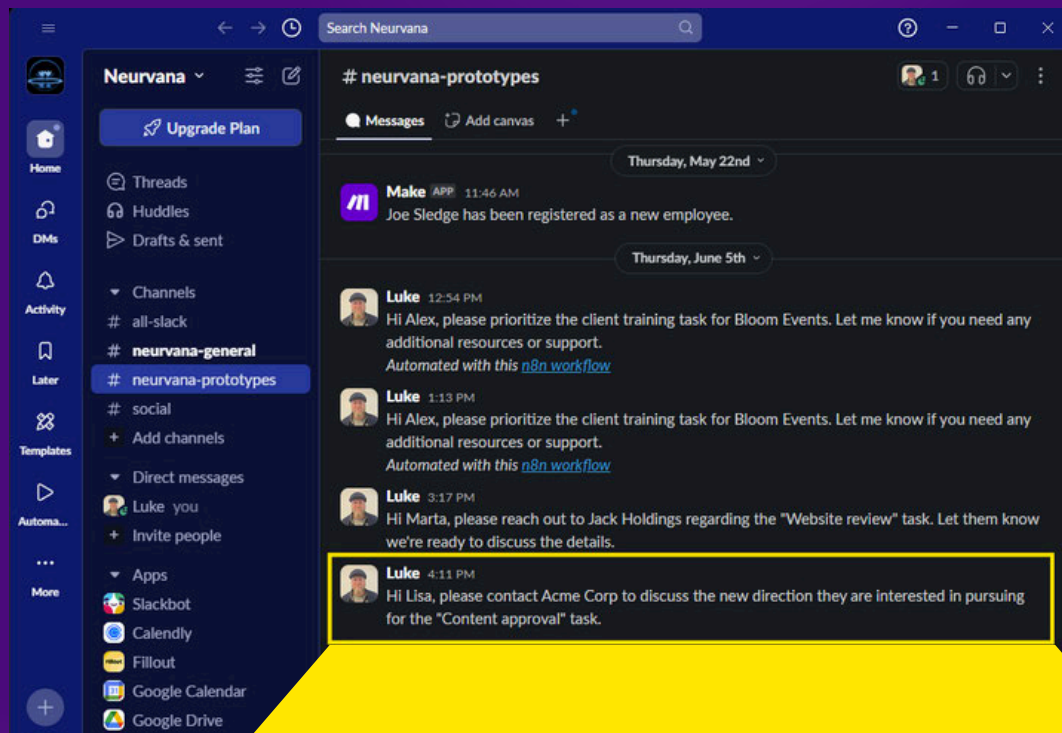

Follow-Up Instructions are turned into clear Slack messages for your team.

One workflow handles both.
Your intent decides the path.

Message Sent. Record Kept.

Your instruction becomes a professional Slack message with clear context: teammate name, task details, and your specific direction.

Simultaneously, an email lands in your inboxes with the full message, timestamp, and assignee details.

Clean communication to your team,
complete documentation for your records.

Less Chasing. More Leading.

Your time is too valuable for endless
task tracking.

One call: get updates,
give instructions,
keep teams aligned.

Everything auto-logs
to Slack and Gmail.
Nothing gets missed.

Lead with confidence.
Skip the chase.

Thoughtfully Built. Ready to Evolve.

This prototype sets the stage with modular design for easy platform changes.

Experience it for yourself.
The chat version is linked in the post above.
